1/1 point

- Template Pattern
- Factory Method Pattern
- Simple Factory
- Composite Pattern

## **/**

### Correct

Correct! The Creator superclass in the Factory Method pattern has operations that operate on an object, but has the actual creation of that object outsourced to an abstract method that must be defined by the subclass.

- d)

### ✓ Correct

Correct! Both the component and Leaf classes implement the component interface (or they can inherit from a component superclass). The Composite class aggregates objects with this interface.

- Facade Pattern
- O Decorator Pattern
- Singleton Pattern
- Proxy Pattern

## /

## Correct

Correct! This is a proxy. The AccessSales object acts as a lightweight version of the SalesData class.

- a)
- b)
- d)

## ✓ Correct

Correct! The client interacts with only the Facade. The Facade then manages the subsystem.

6. What	is the differ	rence between	n the Factory	Method at	ind a Sim	ple Factory?
---------	---------------	---------------	---------------	-----------	-----------	--------------

<ul> <li>Simple factori</li> </ul>	es cannot be	e subclassed
------------------------------------	--------------	--------------

- In the factory method pattern, the factory itself must be instantiated before it starts creating objects. This is usually done with a dedicated method.
- In Factory Method, concrete instantiation is done in a designated method, where a Simply Factory creates objects for external clients
- A simple factory instantiates only one kind of object.

#### Correct

Correct! This is a pretty good short definition of a factory method.

7. José wants to build behaviours by stacking objects and calling their behaviours with an interface. When he makes a call on this interface, the stack of objects all perform their functions in order, and the exact combination of behaviours he needs depends what objects he stacked and in which order. Which Design Pattern best fits this need?

Singleton Pattern

Factory Method Pattern

Composite Pattern

Correct! Decorator is a great pattern when you need to add behaviours with aggregation.

8. You need to connect to a third-party library, but you think it might change later, so you want to keep the connection loosely coupled by having your object call a consistent interface. Which Design Pattern do you need?

Decorator

Facade

Adapter

Proxy

Correct! The adapter pattern keeps loose coupling between the client and the interface in question. If either changes, only the adaptor needs to be changed.

- a)
- c)
- d)

## ✓ Correct

Correct! The context "has a" state object to determine its state. How requests are handled is determined by the current State object.

- 10. Which of these design principles best describes the Proxy pattern?
  - separation of concerns, because the Proxy object has different concerns from the subject.
  - generalization, because a proxy is a general version of the real subject
  - encapsulation, because the Proxy hides some of the detail of the subject
  - decomposition, because the Proxy object has different concerns than the subject

### 1

#### Correct

Correct! The Proxy encapsulates some behaviour of the subject in a simpler way, and delegates to the subject when needed.

11. Ashley has a method in her class that needs to makes a request. This request could be handled by one of several handlers. Which design pattern does she need?

Facade

Decorator

Chain of Responsibility

Template

#### Correct

Correct! The Chain of Responsibility is a pattern for passing a request down a line until one of the handlers can handle it.

12. Colin is designing a class for managing transactions in software for a banking machine software. Each transaction has many of the same steps, like reading the card, getting a PIN, and returning the card. Other steps are particular to the type of transaction. Which pattern does he need?

Mediator

Template

MVC

State

Correct! The Template method is used for situations in which the same general set of steps are followed, but some steps are different in their specifics.

- 13. Which of these is **NOT** a good use of the Command pattern?
  - Sending a command to a third-party service or library
  - Supporting undo/redo queues of commands
  - Building macros, for example in an image manipulation program
  - Building a user-interface that can be used to perform operations

Correct! This better describes the Facade or Adapter pattern.

- a)
- b)
- c)
- d)

# ✓ Correct

Correct! This diagram has all the correct elements of an Observer pattern.

15.	Which code smell	may become a	problem with t	he Mediator	design pattern	?
-----	------------------	--------------	----------------	-------------	----------------	---

Refused Bequest

Speculative Generality

Inappropriate Intimacy

Large Class

### /

### Correct

Correct! The Mediator class can quickly become very large, which means it might have this or related code smells, like Divergent Change or Long Method.

16. Hyun-Ji is developing a program. She wants to create a Student class that behaves differently based on if the student has not registered for classes, is partially registered, fully registered, or fully registered and paid. Which design pattern does she need?

Mediator

Template Method

State

Proxy

#### Correct

Correct! The State of the student will determine its responses to various requests. Exactly what she needs.

17.	Which of the:	se methods i	is found i	n a typical	Observer	class?
-----	---------------	--------------	------------	-------------	----------	--------

notify()

getState()

update()

addObserver()

## Correct

Correct! The Observer class needs to update itself.

- ( a)
- (a)
- ( c)
- ( d)

# Correct

Correct! Only some of the steps are implemented in the subclass.

19.	In the Mediator Pattern, which pattern is often	າ used to m	nake sure the	Mediator	always	receives t	he
	information it needs from its collaborators?						

Observer

Command

Chain of Responsibility

Template Method

### Correct

Correct! The Mediator can be made an Observer of all of its Collaborators.

20. In the MVC Pattern, which of these is usually made int	າto an Observer?
--	------------------

Back-End

View

Controller

Model

Correct! Views are usually subscribed to the model so that when changes are made, the views are updated.

21. Which of these answers does **NOT** accurately complete the following sentence? "A class is considered closed to modification when..."

...it is proven to be stable within your system

...all the attributes and behaviours are encapsulated

...it is tested to be functioning properly

...its collaborators are fixed

#### Correct

Correct! This is NOT part of being closed to modification. New collaborators may be created that call on this object. Of course, it cannot call on any new collaborators without being modified.

86 B	1.00	-	-	
40 I	F 600 I	III 9 1	101	и
-	P. ADDRESS   1	III 54		ш.

22	1.1	F	D 1	T	D 1 1 1	9	Γ.	
11	HOW C	ines the	Dependency	inversion	Principle	Improve	your software	SVSTAMS
+	I IOWY C	OCS CITE	Dependency	1116 (121011	THICIPIC	HIDIOEC	your soleware	oyocciiio

- Client classes become dependant on low-level concrete classes, rather than dependant on highlevel generalizations
- Client classes become dependent on high level generalizations rather than dependant on low level concrete classes
- Client classes use an adapter to facilitate communication between itself and the rest of the system
- Opendency becomes inverted by having the system depend on the client classes

#### Correct

Correct! Being dependent on a generalization allows your system to be more flexible.

23. Allison has a search algorithm, and she would like to try a different implementation of it in her software. She tries replacing it everywhere it is used and this is a huge task! Which design principle could Allison have used to avoid this situation?

Don't Repeat Yourself

Composing Objects Principle

Dependency Inversion

Principle of Least Knowledge

#### Correct

Correct! Allison should have made every client of this search algorithm call an interface or an abstract class instead of the concrete search algorithm. That way, when she changed the implementation, the clients would be unaffected.

24. Which of the code smells is shown in this code example of a method declaration?

1	private void anOperation(String colour, int x, int y, int z, int speed)	

Message Chains

Primitive Obsession

Large Parameter List

O Long Method

Correct! A long parameter list like this is often an indication that you should define an abstract data type to contain this bundle of information.

25.	Which object-oriented	design	principle do	Long	Message Chains,	a code smell,	usually violate?
-----	-----------------------	--------	--------------	------	-----------------	---------------	------------------

Open/Closed	Principl	e

### Cohesion

- Principle of Least Knowledge / Law of Demeter
- Separation of Concerns

### ✓ Correct

Correct! A class should only know about a few other classes. Long message chains will make your code rigid and difficult to change.

1/1 point

## 26. Which code smell can you detect here?

```
1 public class Person {
2   int age;
3   int height;
4   String hairColour;
5
6   public int getAge() { return age; }
7   ...
8
9 }
```

- Feature Envy
- O Primitive Obsession
- Data Class
- O Data Clump

27.	What are the	components of the	MVC pattern?

Model, View, Command

Member, Vision, Controller

Model, Vision, Command

Model, View, Controller

Correct! Model View Controller

28.	<ul> <li>The interface segregation principle encourages you to use which of these object-oriented design principles?</li> <li>Choose the 2 correct answers.</li> <li>decomposition</li> </ul>				
	Correct  Correct! Instead of using inheritance, the Interface Segregation principle encourages you to separate functionality into different interfaces, then combine it to get the behaviour you want.				
	<ul><li>■ generalization</li><li>✓ abstraction</li></ul>				
	<ul> <li>Correct</li> <li>Correct! The principle encourages you to select good abstractions for your entity.</li> </ul>				
	encapsulation				

29.	nterface Segregation is a	good way to avoid which cod	de smell? Choose the best	possible answer.
-----	---------------------------	-----------------------------	---------------------------	------------------

Refused Bequ	est
--------------	-----

- Switch Statements
- Long Method
- O Divergent Change

#### Correct

Correct! By composing with interfaces instead of inheriting, you can avoid your classes inheriting behaviour that they will not use.

- 30. Which of these statements about the Decorator pattern are true?
  - 1. The decorator classes inherit from the basic object which is being decorated
  - 2. Decorator objects can be stacked in different order
  - The first statement is true
  - The second statement is true
  - Neither statement is true
  - Both statements are true

### /

#### Correct

Correct! This allows you to build behaviour in different ways. It's also why you must use an interface to build this pattern instead of inheritance, because you do not want to fix the order of objects with inheritance.
